**Subject:** Supplemental Item S28D - offshore drilling

**Attention:** This email originated from outside the County of Orange. Use caution when opening attachments or links.

Please consider my opposition to off-shore drilling, for the coast of California.

We already have oil platforms off our coast, and one of the lines was fairly recently involved with a spill. We need to protect our coast and the marine life therein.

Kindly vote against any offshore drilling and any other activity that threatens the quality of our water and beaches.. There are safer alternatives.

Thank you.

Judith Lang

As a lifelong resident of California's coastline, I'm writing in support of a County resolution against offshore drilling. I lived through the huge Santa Barbara spill as well as the several others throughout the years. No technology has every surfaced that can stop these spills, and they are devastating to the ocean wildlife as well as the communities along the coast.

Thank you for helping to preserve this critical environment.

Steve

Supervisors -

Whether or not the Trump administration cares to recognize it or not the earth is in a climate crisis. The science is clear and compelling. Those who choose to ignore it are prioritizing short term profit over the survival of the human race. Make no mistake - the earth will survive regardless, but the human race is another story.

We have already seen significantly more weather-related catastrophes in the last several years than are normal for a decade. We have also seen the severity of those event increase dramatically. The science says that our atmosphere is warming because of CO2, methane, and nitrous oxide emissions. All of which are byproducts of burning fossil fuels.

We have also seen the catastrophic results of oil leaks and spills from offshore oil rigs, their pipelines, and even from oil tanker accidents. The damage to our coastal ecosystem takes decades to recover. Wildlife are especially impacted. And the economic damage to coastal communities that thrive on tourism is massive.

We have alternatives. Wind, solar, and geothermal generation of electricity avoids all of these risks. Converting operation of vehicles, plants, and homes is not trivial, but can be done, and the more time we allow for the transition, the less disruptive it will be.

If you want to see what the future can look like, visit the newly built, all-electric, UCI Medical Center that is opening up this month.

You may not have the power to protect the entire coast, but you do have the power to protect our coast.

Please do so and pass this item.

Thank you.
