Re: Proposed General Aviation Improvement Plan

Dear Chairperson Bartlett and Supervisors Steel, Do, Wagner and Chaffee:

In appreciation of the thoughtful positions taken by Supervisors Do and Steel regarding the GAIP and in recognition of Supervisor Wagner's statement that the intent behind the 1985 Settlement Agreement be fully recognized and honored, I thank you for the leadership and guidance you demonstrated during the May 7th meeting on this important issue.

It is clear that it is well within JWA's and the County's legal right when renegotiating and entering new FBO lease agreements that they mandate the following:

- That Supervisor Do's lead be followed to maintain the general aviation fleet mix and the number of general aviation jets home-based at JWA in accordance with the 2016 baseline specified by Supervisor Do during the May 7th meeting;
- That in recognition of the intent behind the 1985 Settlement Agreement, including the protection of local communities against excessive nighttime noise, that new and renegotiated FBO lease agreements include terms limiting FBO hours of operation that are consistent with the curfew hours maintained by the commercial airlines home-based at JWA;
- That landing and/or penalty fees that are at a sufficiently high rate be established for general aviation jets departing or arriving outside of set curfew hours;
- That as the owner and operator of JWA, the County maintain its control and responsibility to manage JWA general aviation and refrain from relinquishing control and oversight to the FBOs, and
- For safety and security purposes, customs and immigration services are confined to JWA's commercial aviation terminal.

In fairness to the owners of the existing fleet of small general aviation piston planes presently home-based at JWA, they should not be forced to relocate to make room for additional "wealthy" private jet owners. Accordingly, it is important that the acreage currently allotted to small piston planes remain the same and be indefinitely preserved for their use.

Lastly, it is respectfully requested that the Board of Supervisors take a pause for 120 days, during which a game plan and a new alternative can be established that will address the needs of all of those concerned, including those living, going to school and working in the many communities impacted by JWA noise and pollution.

In conclusion, if the Board adheres and agrees to the above suggested guidelines, which take into consideration the interests of all of the involved parties:

- The FBOs and general aviation facilities will be improved and modernized;
- Small piston plane/"tie down" owners currently home-based at JWA will remain in place and the current acreage on which they are located will not be altered; and
- The health, safety and quality of life of Orange County residents will not be impacted by further operational expansion of JWA, which will help to limit future increases in business jet traffic.

Sincerely,

Nils Andersson
