Acceptable Moisture Reading Guidelines:

Wood:

6-14% is considered DRY

15-17% is BORDERLINE
>17% is WET

Drywall/gypsum/sheetrock:
0-0.5% is DRY
0.6-1% is BORDERLINE
>1% is WET

IV. CONCRETE, BRICKS AND PLASTER:

Moisture meters use an arbitrary reference scale for these materials and will alarm at high levels. Meters must be set to the appropriate material type. If they are set inaccurately to “drywall” or “wood”, the meters may not give an accurate assessment for concrete etc.) Meters usually give a % moisture, but the WET/DRY guidance varies per meter.

For example; one (1) meter type indicates 0-30% as dry; 30-70 borderline; 70+ wet.

For this and all other types of materials (Except for Wood and Drywall listed above), acceptable moisture content will be determined by a professional Industrial Hygienist.

Note: The moisture guidelines and specifications set here will determine the continued need and justification for equipment charges. All daily moisture logs will be maintained and submitted with invoices. Invoices with daily charges on equipment that do not have moisture logs measured within the acceptable guidelines may not be paid for. Final determination will be made by County Project Manager and County Industrial Hygienist.

V. WATER INTRUSION REMEDIATION CATEGORIES AND REMEDIATION REQUIREMENTS:

Category one (1) Water Intrusion Remediation:

1. The following procedures will be performed during a category one (1) (i.e. clean water) event:
 - a. Secure the area and keep individuals out until clean-up is complete.
 - b. Verify water has been stopped from entering the space. If water is still entering space, contact County Project Manager, or Designated Individual immediately. Stop water from entering the space (i.e. if the water is from a plumbing leak, shut off a secondary valve to the leak location, or the main if a secondary valve cannot be located).
 - c. Dam-up the space to keep water from entering new unaffected areas of the space.

Note: Once secured and after initial remediation response, Contractor must provide a quote with a not to exceed amount that is calculated utilizing industry standard estimating software before any demo or removal of materials begins. Once received by the county representative, the Contractor must receive a NTE (Not to Exceed) and NTP (Notice to Proceed) in writing before work can begin.

2. Once secured and the water has been stopped, begin water remediation to secure and stabilize area only. Contractor must verify with County Project manager or

Designated Individual to verify if there has been an asbestos and lead-based paint (LBP) survey of the space before any demolition can occur in the space.

- a. If there has not been a survey performed, the County Project Manager or Designee will proceed with obtaining an inspection for these items (asbestos and LBP).
- b. If no asbestos and/or LBP is present, contractor must receive a clearance first and can then proceed with work.
- c. If asbestos and/or LBP is present, stop all work, clear the area and contact County Project Manager or Designated Individual to assess and complete asbestos, LBP remediation.

Note: Contractor cannot proceed with demo until LBP and Asbestos levels are determined and remediation is completed as indicated by test results.

3. If no asbestos and LBP materials are present and if the event is a new event, i.e. less than 24 hours old and the Contractor has an approved “Not to Exceed” amount for the work and a “Notice to Proceed” with work in writing (an email is acceptable to meet this requirement):
 - a. Remediation Contractor shall be mobilized per the Contract and install fans and de-humidifying equipment into all areas of the space that were affected by the water to start the extraction and drying process. *Note: The County does not authorize Fans and Dehumidifying equipment without daily moisture reading confirming moisture levels that require their use.*
 - b. If tact down carpeting is present, lift all wet carpeting and remove and dispose of the wet pad.
 - c. Remove the baseboard and/or cove at the bottom of the effected walls, drill holes into the walls below the base board/cove level and blow air at the holes to assist in the drying process. If it is possible, have the contractor inject warm air into the holes at the bottom of the walls.
 - d. If it is determined that it is not possible to dry the walls and the decision has been made to remove wall material (whether drywall or plaster), only remove the wall material that is determined to have an elevated level of moisture. Measure this by using an appropriate (for the type of wall present, i.e. drywall or plaster) moisture meter. This should be done by the County Industrial Hygienist or a representative authorized by the County Industrial Hygienist. The amount of wall removed should be no more than the lower 48 inches of the wall. The only reason that additional wall material above this level may need to be removed, is if the water leak is from above, such as a pipe leak in the plenum or a roof leak. Either way, the only wall material that should be removed, should be the wall material that is determined to have an elevated level of moisture.
 - e. If the leak has affected the ceiling (i.e. suspended ceiling tiles), then remove and dispose of the suspended ceiling tiles that have become wet. If the ceiling is either drywall or plaster, install fans in the above ceiling area as well to start the drying process.
 - f. If it has been determined that the ceiling cannot be dried, and the decision has been made to remove the ceiling, then, only remove the ceiling material that was determined to have an elevated level of moisture using a calibrated moisture meter.

Note: The remediation portion and build back portion will be executed and quoted separately

VI. CATEGORY 2 AND 3 WATER INTRUSION REMEDIATION:

1. The following procedures will be performed during category 2 (i.e. grey water) and 3 (i.e. black water) back-up events, which are contaminated water back-up events.
 - a. Secure the area and keep people out until clean-up is complete.
 - b. Stop the sewage from entering all unaffected space.
 - c. Dam-up the space to keep sewage from entering unaffected space.

Note: Once secured and after initial remediation response, Contractor must provide a quote with a not to exceed amount that is calculated utilizing industry standard estimating software before any demo or removal of materials begins. Once received by the county representative, the Contractor must receive an authorized NTE (Not to Exceed) and NTP (Notice to Proceed) in writing (an email is acceptable to meet this requirement) before any additional work can commence.

2. Once secured and the water has been stopped, begin water remediation to secure and stabilize area only. Contractor must verify with County Project manager or Designated Individual to verify if there has been an asbestos and lead-based paint (LBP) survey of the space before any demolition can occur in the space.
 - a. If there has not been a survey performed, County will proceed with obtaining an inspection for these items (asbestos and LBP).
 - b. If no asbestos and/or LBP is present, Contractor must receive a clearance first and can proceed.
 - c. If asbestos and/or LBP is found to be present, stop all work and contact County Project Manager or Designated Individual to access and complete asbestos, LBP and water intrusion remediation.

Note: Contractor cannot proceed with demo until LBP and Asbestos levels are determined and remediation is completed as indicated by test results.

- d. The remediation scope of work must include removing and disposing of all porous items (i.e. carpeting, padding, furniture, walls, etc.,) contacted by sewage.
- e. Workers who perform this work should be adequately protected using respiratory protection (particulate and organic vapor), disposable coveralls, gloves, etc.
- f. The amount of wall material that should be removed should be the portion of the wall that was contacted by the sewage, plus an additional 12 to 24 inches in all directions.
- g. The non-porous surfaces affected by the event should be cleaned thoroughly using an antibacterial solution (i.e. mild bleach solution [i.e. 10% sodium hypochlorite to 90% water], quaternary ammonium detergent, or other non-hazardous chemical) to thoroughly clean all areas that were impacted by the sewage event.

- h. Post remediation samples for the potential constituents of a sewage back-up event may be collected to ensure that the area is clean for rebuilding.

VII. FUNGAL REMEDIATION:

The following procedures will be performed prior to and/or during a fungal remediation event.

1. Contractor shall verify with County Project Manager or Designated Individual to verify if there has been an asbestos and lead based paint (LBP) survey of the space before any demolition can occur in the space.
 - d. If there has not been a survey performed, County will proceed with obtaining an inspection for these items (asbestos and LBP).
 - e. If no asbestos and/or LBP is present, Contractor must receive a clearance from County Project Manager or Designated Individual and confirm survey has been performed and no asbestos and/or LBP was determined to be present, once all clearance approval has been received, Contractor shall proceed.
 - f. If asbestos and/or LBP was determined to be present, stop all work and contact County Project Manager or Designated Individual to assess and complete asbestos, LBP and water intrusion remediation.

Note: Contractor shall not proceed with demo until LBP and Asbestos levels are determined and remediation is completed as indicted by test results

- g. Determine the source of the water intrusion event, this will be performed by either the Orange County Public Works or an authorized representative.
- h. Determination of the source of the water intrusion event, this will be performed by either the Orange County Public Works or an authorized representative.
- i. Collection of surface samples to determine whether actual fungal growth has occurred at the site shall only be performed when authorized by the County Industrial Hygienist or an authorized representative of the County Industrial Hygienist. The type of mold present is not pertinent information, because any fungal growth present shall be removed regardless of type, genus, or species.
- j. Once fungal growth has been determined to be present, create a remediation scope of work for a contractor bid. The remediation scope of work shall include language that all affected building materials (i.e. building materials with fungal growth), plus an additional 12 to 24 inches of non-impacted and non-water stained building materials will be included in the remediation scope of work.
- k. The requirements for post fungal remediation will be based on the type of building and remediation project. Typically, post fungal remediation evaluations include a visual inspection, a moisture meter survey to determine whether building materials are dry, and the collection of surface and/or air samples. These will be decided on a project by project basis by the County Industrial Hygienist or a representative authorized by the County Industrial Hygienist.

Note: Contractor must provide a quote with a "Not to Exceed" amount that is calculated utilizing industry standard estimating software before any demo or removal of materials begins. Once received by the county representative, the Contractor must receive an authorized NTE (Not to Exceed) and NTP (Notice to Proceed) in writing (an

email is acceptable to meet this requirement) before any additional work can commence.
